

# RAG AI AGENT

Hello! I'm your RAG AI Assistant. How can I help you today?

Type your message...

Manage knowledge

Create a clean, modern AI chat interface similar to ChatGPT, but without the conversation history sidebar. The layout includes a top header bar with the text "RAG AI AGENT" styled as a logo (bold, large font, center-aligned). Below that is the main chat area: a vertically scrolling window with alternating chat bubbles for user and assistant messages. Use soft shadows, large rounded corners (2xl), and a neutral background (#f5f5f5). The input area is fixed at the bottom, containing an expanding text input and a "Send" button with smooth animations. Typography is clean and sans-serif, with the assistant's messages in a slightly dimmed color. Ensure mobile responsiveness and smooth message transitions.
