Set up steps

1. Google Cloud Project and Vertex AI API:

Create a Google Cloud project.

Enable the Vertex AI API for your project.

1. Google AI API Key:

Obtain a Google AI API key from Google AI Studio.

1. Pinecone Account:

Create a free account on the Pinecone website.

Obtain your API key from your Pinecone dashboard.

Create an index named company-files in your Pinecone project.

1. Google Drive:

Create a dedicated folder in your Google Drive where company documents will be stored.

1. Credentials in n8n: Configure credentials in your n8n environment for:

Google Drive OAuth2

Google Gemini(PaLM) Api (using your Google AI API key)

Pinecone API (using your Pinecone API key)

1. Import the Workflow:

Import this workflow into your n8n instance.

1. Configure the Workflow:

Update both Google Drive Trigger nodes to watch the specific folder you created in your Google Drive.

Configure the Pinecone Vector Store nodes to use your company-files index.

What happens next?

Search nodes...

Action in an app

Do something in an app or service like Google Sheets, Telegram or Notion

Data transformation

Manipulate, filter or convert data

Flow

Branch, merge or loop the flow, etc.

Core

Run code, make HTTP requests, set webhooks, etc.

Advanced AI

New

Build autonomous agents, summarize or search documents, etc.

Add another trigger

Triggers start your workflow. Workflows can have multiple triggers.
